Rayan Automation

Software for project management
and team collaboration

Intelligent management!

In today's fast-paced world, project management and team coordination play a key role in business success. **The Raya Automation application** has been specially developed by the Raya team. By providing a powerful and user-friendly platform, this application offers planning, organization and task tracking for teams and organizations in the easiest way possible.

By using this application, business processes are completed faster, coordination between team members and the organization is improved and the overall productivity of the organization is increased. However, one of the most important benefits of this application is the ability **to manage communication between contractors and clients**. With this unique feature, contractor requests are forwarded directly to the client, facilitating the approval and execution process.

With this application, you will experience a new level of project management and team collaboration and drive your projects forward faster, easier and smarter.

Pages of the application

User Dashboard (Menu)

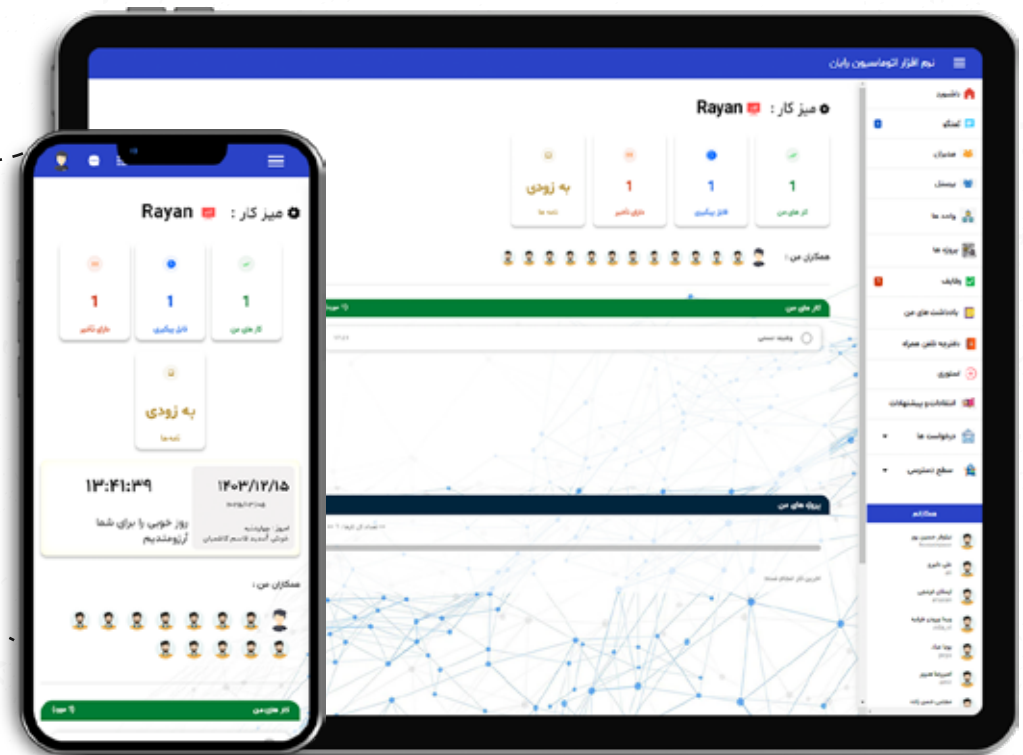

With a modern and integrated user interface, this software provides quick access to information, task tracking and better interaction with teams. The most important functions of this system are presented below.

Smart User Dashboard / View the status of tasks, approvals and pending orders

Task management and tracking / Security Create, assign and track team tasks

Quick access to resources and communication / Document management and interaction with the internal organization

Compatibility with mobile devices and desktops / seamless use on all devices

Department for managers

The Managers section is designed for managing, monitoring and controlling organizational processes. It enables managers to monitor the performance of teams, projects and tasks and make better decisions.

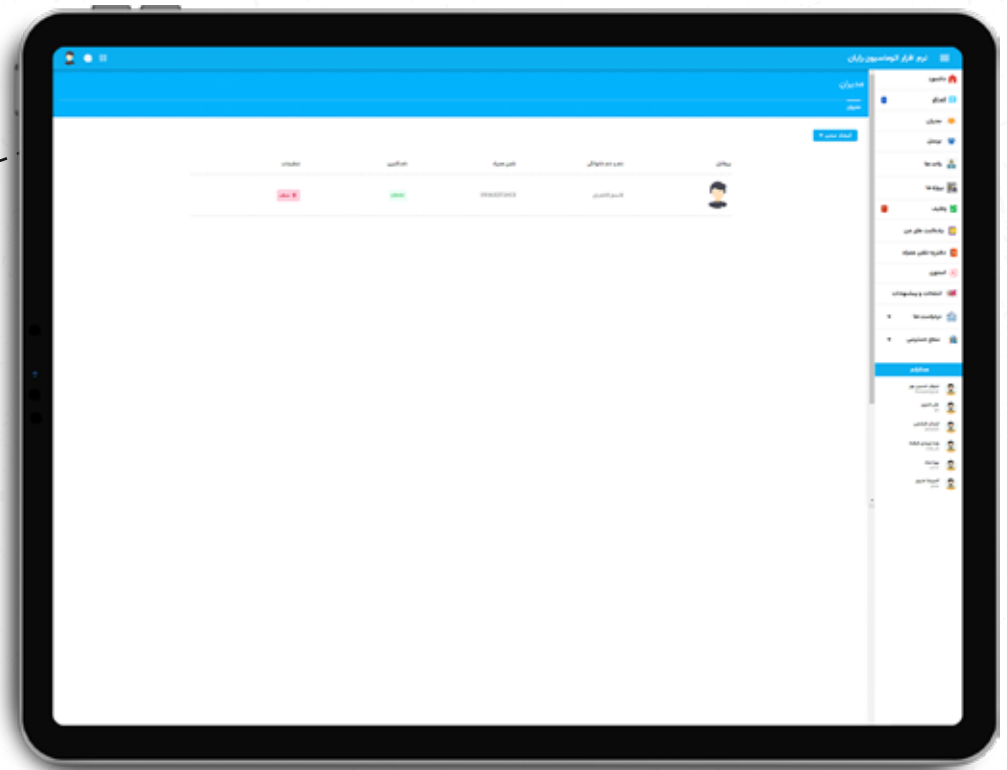

Access to reports and analyzes / display of employee performance, project progress and task status

Manage access levels / Assign access permissions to users based on their roles

Monitor organizational processes / monitor and track ongoing tasks and projects

Creating and assigning tasks Defining tasks and assigning them specifically to employees

This section helps organizational leaders to better control things, make better decisions and increase team productivity.

HR department

The Human Resources section is used to manage employee information and improve organizational communication.

In this section, users can view and manage their staff list, roles, contact information and status.

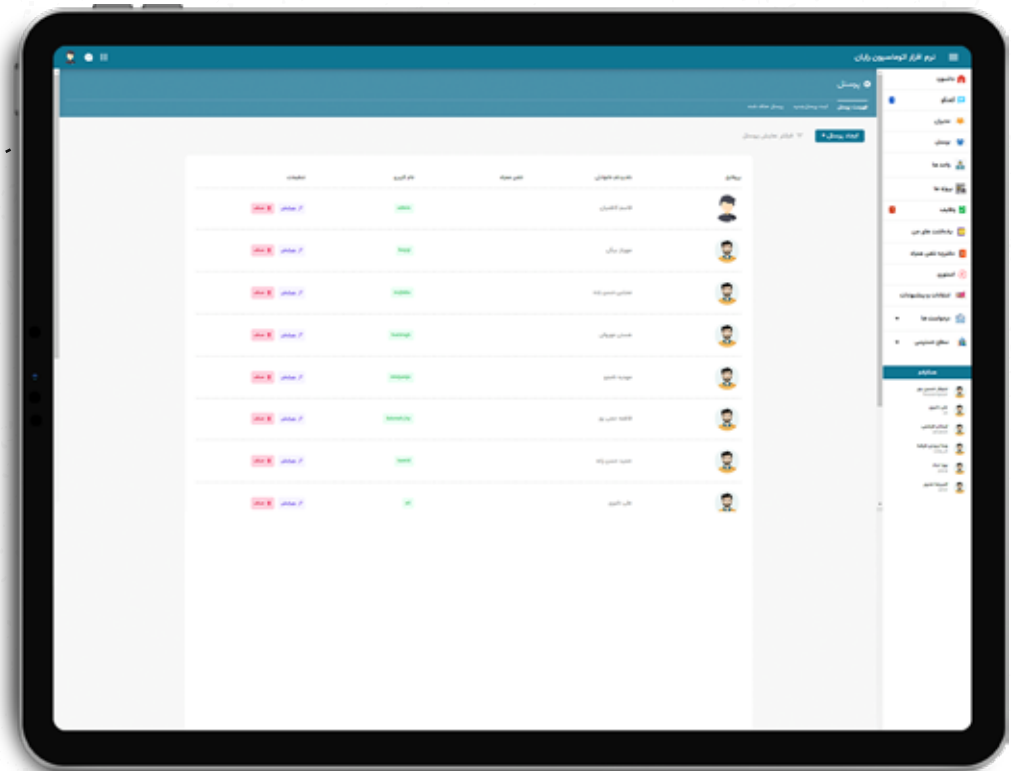

View and manage personnel information / Quick access to employee information, positions and units

Advanced search and filtering / Quickly find employees by name, unit or organizational role

Update personnel information / Security, editing and management of employee information

Improve the organization of human resources / Support managers in monitoring and planning

This area helps to increase organizational transparency, improve interaction between teams and facilitate HR administration.

Head of unit

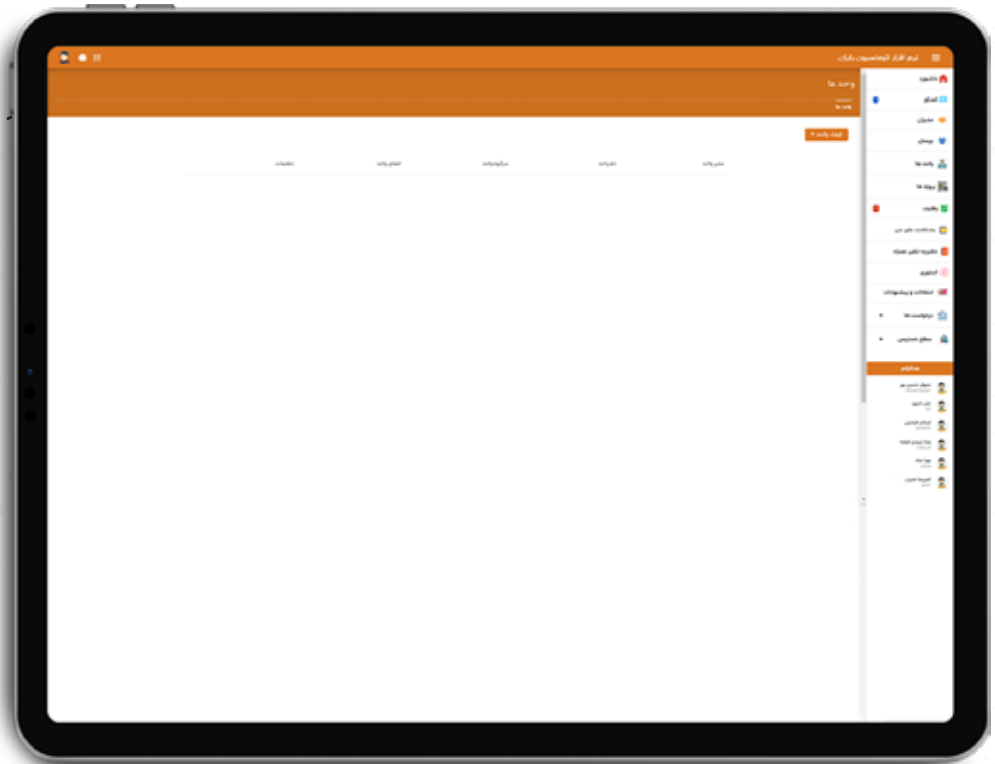

The Units area is used to manage the organizational structure and team division. In this area, managers can define different organizational units, assign members to them and manage communication between the units.

Definition and management of organizational units / creation of different units

Categorization and assignment of employees / Naming the members of the individual units and their responsibilities

Increasing transparency in team management / Precise presentation of the team structure and responsibilities

This section improves team organization, increases productivity and the coordination of business processes and helps managers to better control their organizational structure.

Project management

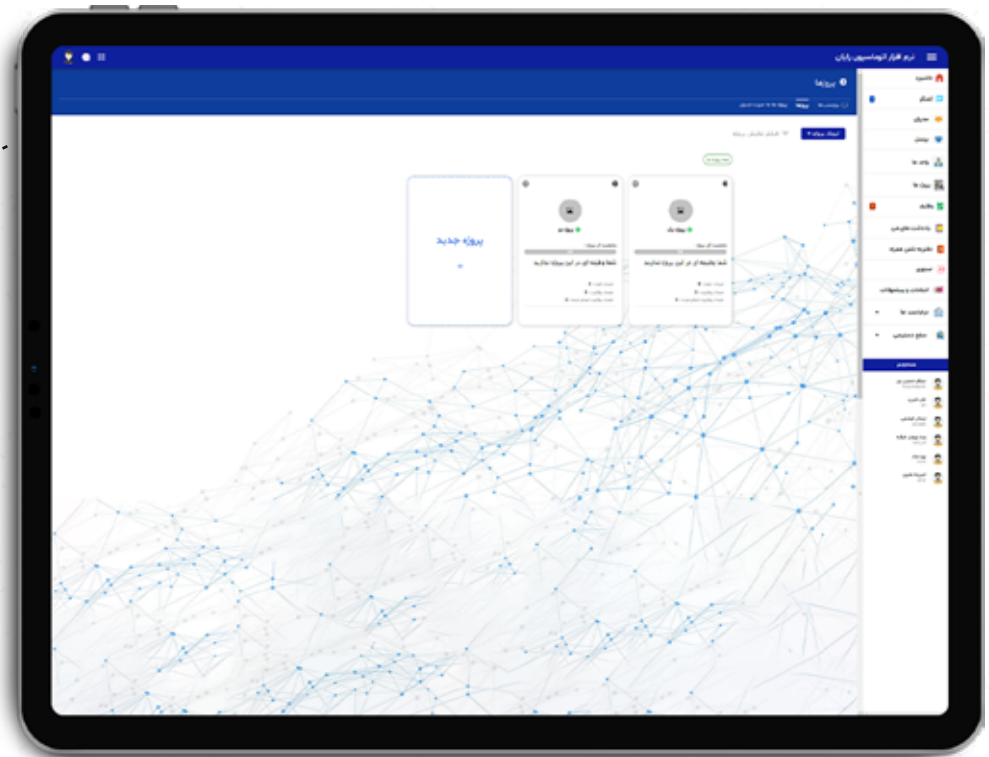

This section of the Ryan Automation software allows users to create, manage and track their projects. A list of current projects is displayed on this page and users can define new projects or access existing projects.

Create new projects/project definitions with a few simple clicks

Categorize projects / display projects and their status in separate charts

Manage tasks for each project / View the number of registered tasks and their status

This section is very useful for teams and project managers as it shows the status of projects and associated tasks at a glance, preventing wasted time tracking issues.

Task management

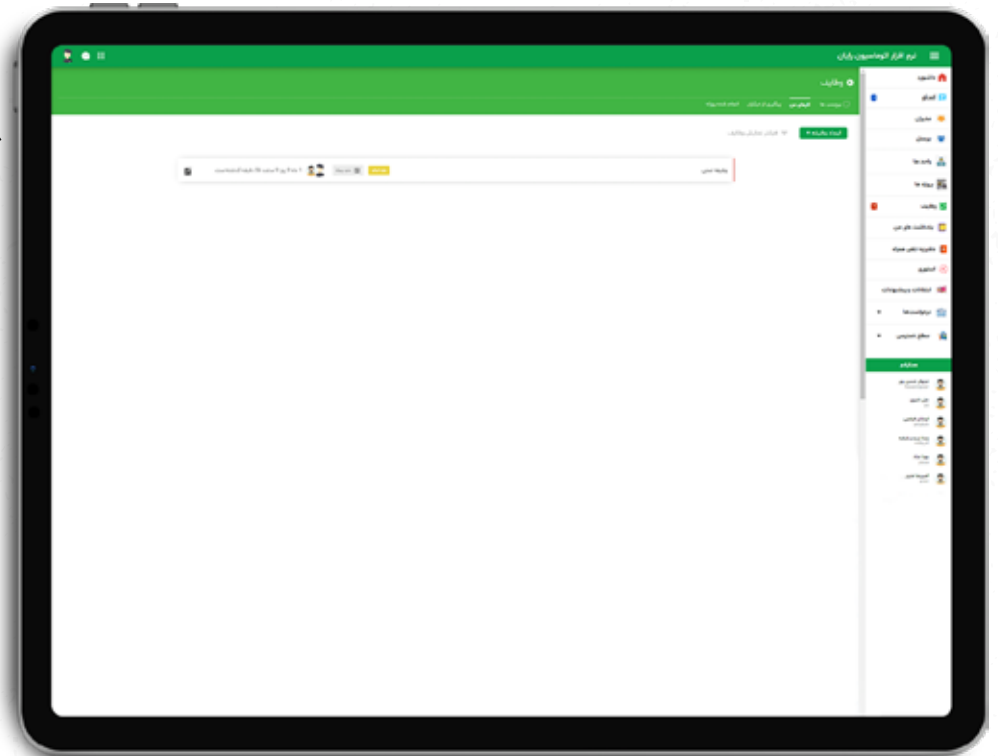

This area is for task management and tracking and allows users to create, view and manage their tasks. On this page, users can categorize tasks based on tags, assigned values and completed tasks.

Classify/display tasks and filter by status (in progress, completed, etc.)

View details of each task / view history, schedule and progress status

Ensure that tasks are defined by specifying the performer and deadline for completion.

This section helps to better organize tasks, increase productivity and prevent tasks from being forgotten and is a useful tool for managers and team members.

My notes

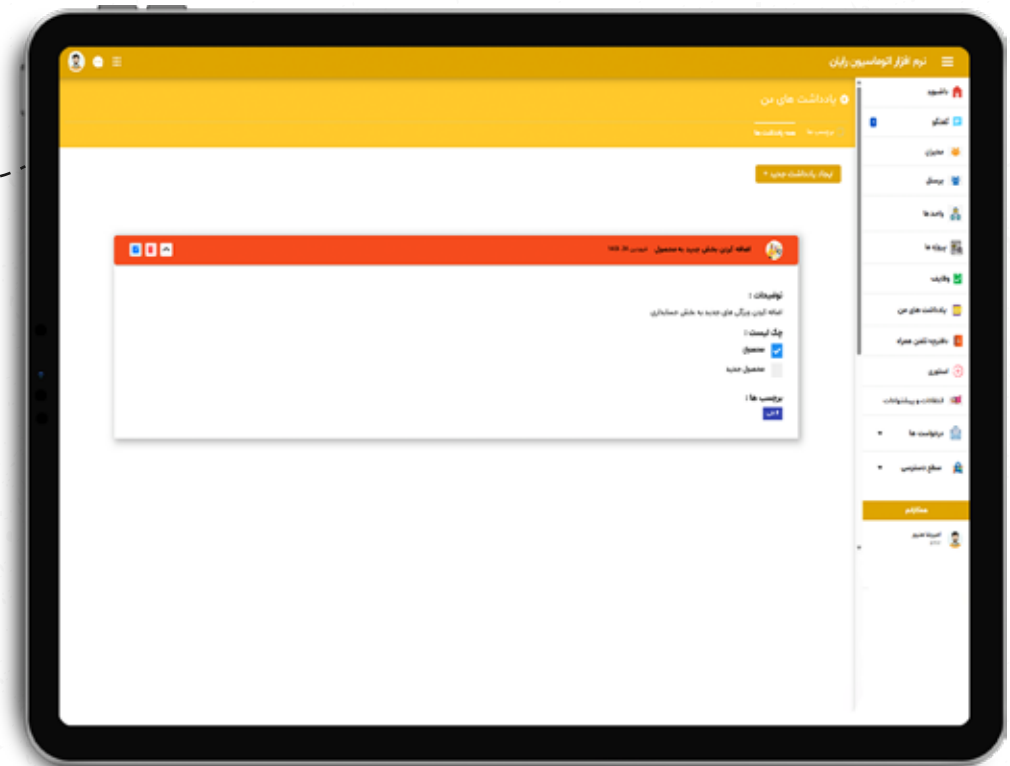

The My Notes section is a place where personal notes for travelers can be captured, stored and managed. In this area, you can categorize important notes, daily tasks or ideas and access them at any time.

Keep information private and secure / Notes are only visible to the owner

Integrated with other parts of the system / Securely link notes to tasks or projects

Sorting by date or title / Better management of posts for quick searching

This section helps travelers to focus more on their personal matters and not miss anything important.

From chaos to productivity in one click

The automation software is a comprehensive, simple and intelligent solution for organizational management. From tasks and projects to personnel and personal notes, everything is brought together on a single platform.

A comprehensive tool for any team that wants to be more professional!
